Documentation

**Highly versatile, extremely compact drives**

- Power range 100 W to 9 kW
- Multi-protocol-enabled, Ethernet-based communication
- Innovative multi-encoder interface
- Optional integrated safety technology

With the newly developed multi-protocol-enabled communication hardware, IndraDrive Cs fulfills the increased demands for openness and consistency.

SERCOS III, PROFINET IO, EtherNet/IP and EtherCat are available. These Ethernet-based interfaces are connected via a universal communication hardware, which can be configured easily using software. Alternatively, IndraDrive Cs can also be equipped with a conventional communication interface such as PROFIBUS. With this solution, Rexroth is offering users a high level of flexibility in communication with minimal engineering effort.

In conjunction with the new multi-encoder interface for evaluating all common encoder types and an additional optional slot, very special drive tasks can also be carried out safely. IEC-compliant motion logic and industry-specific technology modules make IndraDrive Cs the perfect choice for a wide range of uses.
